CHEATSHEET

Boxes Section

Subsection 1

Subsubsection 1

Subsubsubsection 1

> **this it the title of the box**
> there is a bit of content for this box

> **this it the title of the box**
> there is a bit of content for this box

> **this it the title of the box**
> there is a bit of content for this box

> **this it the title of the box**
> there is a bit of content for this box

> **this it the title of the box**
> there is a bit of content for this box

> **this it the title of the box**
> there is a bit of content for this box

> **this it the title of the box**
> there is a bit of content or this box

> **this it the title of the box**
> there is a bit of content for this box

> **this it the title of the box**
> there is a bit of content for this box

> **this it the title of the box**
> there is a bit of content for this box

> **this it the title of the box**
> there is a bit of content for this box

> **this it the title of the box**
> there is a bit of content for this box

> **this it the title of the box**
> there is a bit of content for this box

> **this it the title of the box**
> there is a bit of content for this box

> **this it the title of the box**
> there is a bit of content for this box

> **this it the title of the box**
> there is a bit of content for this box

> **this it the title of the box**
> there is a bit of content for this box

> **this it the title of the box**
> there is a bit of content for this box

> **this it the title of the box**
> there is a bit of content for this box

> **this it the title of the box**
> there is a bit of content for this box

> **this it the title of the box**
> there is a bit of content for this box

> **this it the title of the box**
> there is a bit of content for this box

Code Section

Direct code

```python
def function():
    print("Hello World")
```

```javascript
function function() {
    console.log("Hello World");
}
```

Code in a box

```python
  def function():
 print("Hello World")
```

```python
    def function():
        print("Hello World")
```

```javascript
        function function() {
            console.log("Hello World");
        }
```

```cpp
        include &lt;iostream&gt;
        using namespace std;
```

Code in a box with no pre

`def function(): print("Hello World")`

`def function(): print("Hello World")`

`function function() { console.log("Hello World"); }`

`function function() { console.log("Hello World"); }`
this is an inline text

`def function()`

This is going to be a very long line of code, in order to see if the overflow persists or not (especially when we convert this file to pdf).
Here is a second line.
